

Podcast Transcript for September 5, 2026

Friends, this is a Clock Prophecy Alert for September 5, 2026.

As we approach yet another Feast of Trumpets, the "day and hour that no man knows" (referring to Rosh Hashanah) is approaching once again.

Those who believe this to be a kind of wedding moed for the Rapture are unaware that no such tradition has ever existed in Judaism, in fact marriage was and continues to be forbidden on a high holy day in Jewish culture.

When Jesus said, the Son of Man cometh at a day and hour you think not, he would not have been analogizing a Jewish wedding since this was not permitted during the Feast of Trumpets.

The correct biblical framework for our redemption is the four part harvest taught by Jesus in Matthew 20, where he describes a divided gathering rather than a same-day Rapture for every believer at once.

The harvest pattern is found in the book of Ruth and begins in Spring with first fruits barley, followed by Summer wheat, Fall grapes, and Winter olives.

All four crops are found together in Revelation 6:6, whereas wine is made from grapes and olives are used to press oil.

I encourage you to read my article on the Vineyard Parable for a full explanation.

My updated list of focus dates is based on current Clock measurements, whereas the month of August drops off following numerous cosmic signs that have brought us to the start of the Jewish new year.

These stellar signs point to a future and full manifestation of the Sign of the Son of Man in heaven!

You will notice that I have included the dates for Rosh Hashanah in the list, which begins on September 11 and ends on the 13th, so why is September the 14th (in particular) highlighted?

Some Clock vectors, like the 1.44 convergence in December that we have often talked about, are part of a larger set of related measurements, which is how the 14th of September came to be highlighted.

One string of values that runs all along the entire Clock timeline goes from a high value of about 88 all the way down to negative 20 four years from now.

This value string uses exactly the same set of operations throughout -- from the Clock start date in late 2010 all the way until Tabernacles in 2030.

The point at which the string reaches zero before going negative is just after midnight on the evening of September 13th this year, about 6 hours after Rosh Hashanah ends at sundown the prior evening!

This is quite remarkable, however the data string does something the following day that is equally amazing.

It jumps back above zero to a point where it was 30 days earlier before moving downward again where it reaches zero a second time on the very day that Comet 220P/McNaught comes closest to the Earth on October the 12th!

Exhibits for these results are at the end of the PDF.

I have no way to explain this mathematically and have been unable to find any errors, whereas the appearance of a 30 day countdown is impossible to ignore.

While I can't say for sure what this is pointing to, there are several possibilities.

The airlift out of Jerusalem seems most likely, but it may instead be the head wound event, or it could be both.

Keep in mind that these calculations have been in place for about one year, however I did not become aware of the comet until early Summer, and even Rosh Hashanah has not been on my radar until very recently.

We have already talked about a six month window using a two hour measurement in the last update pointing to February, but the fulfillment window at the start of the Hebrew new year is equally urgent.

The Critical Clock Alerts message titled, The Birth of the Man-child, has received a minor update pertaining to the year of the Lord's birth, which scholars have debated for centuries.

This leaves the Clock timeline unchanged however it reinforces the importance of the year 2030 as the end of 6,000 years since creation.

There are only two years that Jesus could have been crucified on the Friday before Passover as stated in Luke's Gospel, and those years are 30 AD and 33 AD.

Keep in mind that John's Gospel records three Passovers during which Jesus preached, which is why historians believe he ministered for three and a half years.

Another criteria for the birth year of Jesus is the reign of King Herod, who was still alive when Jesus was born, and since most scholars fix Herod's death in the Spring of 4 BC, Jesus must have been born in the second half of 5 BC.

This rules out 33 AD as the year of his death because that would have extended his ministry to at least six years, which would contradict the Gospel of John.

A 30 AD year of death places his baptism in September of 26 AD, exactly 2,000 years ago this month, and marks 2030 as the start of the Millennial reign of Christ.

This also converges perfectly with the Man-child reaching his 13th birthday in 2027, therefore I believe strongly we are going to reach the start of early harvest next Spring!

In my next message I hope to discuss the third temple and why it is unlikely to be completed until after the end of harvest.

Stay alert as you continue to hear what the Spirit is saying to the Churches:

Behold, I come quickly!
